Ag Management Solutions
Innovative technologies, exceptional support
Solutions for success

Whether you want to gather information, reduce input and labor costs, increase efficiency or better manage your land and water resources, John Deere can help. Our Ag Management Solutions encompass the diverse needs of today’s producers. Talk to your local John Deere dealer to determine what’s best for your operation.

Ag Management Solutions

A profitable investment all year long

No matter where, when or how you use our precision technology, the premise behind it is simple – to help you make more money, year after year. And while some of our products have a very specific task, others benefit you year-round.

With AutoTrac™, a GreenStar™ 3 2630 Display and a StarFire™ 3000 Receiver, you have the tools you need to unlock more efficiency and more profit, throughout the year. And with MyJohnDeere, Wireless Data Transfer, JDLink™ Remote Display Access, and Mobile Farm Manager, you can stay on top of your equipment, operators and data from your laptop, smartphone or tablet.

FIELD PREPARATION:
Control input costs, reduce waste, increase yield potential.
- Surface Water Pro™ Plus
- iTec™ Pro
- iGrade™
- Implement Detection
- Pivot Pro
- Documentation

HARVESTING:
Cover more acres with less effort in many crops and conditions.
- AutoTrac™ RowSense™
- Harvest Monitor™
- HarvestLab™ Sensor
- Constituent Sensing
- Machine Sync
- Harvest ID, Cotton
- Documentation
- Machine Harvest States and Settings

† See page 31.
John Deere FarmSight™
Better farming is in your sight

John Deere FarmSight is a complete solution for your farm. It combines your equipment and John Deere’s technology offerings with customized services from your John Deere dealer.

John Deere FarmSight solutions can help you easily gather and access data about your machines and your fields. Intelligent, automated equipment brings more precision, convenience and uptime to your operation. And best of all, it is fully supported by your local John Deere dealer.

2 PLANTING AND SEEDING:
Control input costs, reduce waste, increase yield potential.
- Section Control
- iTEC™ Pro
- Map-based Prescriptions
- Active Implement Guidance
- Rate Controllers
- Implement Detection
- Field Connect
- Pivot Pro
- Documentation

3 NUTRIENT APPLICATION:
Take application operations to a new level of productivity.
- Section Control
- Rate Controllers
- Implement Detection
- AgLogic™
- Mobile Weather
- Pivot Pro
- Documentation
The do-more display: The GreenStar™ 3 2630 Display

Get more capability, more reliability, and more visibility

You said you’d like a better touch-screen and faster operating speeds. And you weren’t shy about telling us you’d like a display that offers new applications, such as video capabilities, operator lock-outs, and even improved field locator functionality.

Well, we listened. The GreenStar 3 2630 Display offers all this and more...in a highly reliable package. Take a look at the many features the GS3 2630 boasts:

- Wireless Data Transfer†
- Remote Display Access†
- Improved touch-screen display
- Access Manager (operator lock-out)
- Video capability
- USB data port
- Stand-by mode
- Documentation
- On-screen mapping
- ISOBUS capability
- Run single or multiple applications at once
- Customizable home page

**Documentation features include:**
- As-applied maps
- Color coverage maps
- Five customized home pages
- Prescription overview layers
- Visual flag indicators
- On-screen keyboard
- Dual varieties

**Standard guidance features include:**
- Viewable headland boundaries
- Boundary proximity indicator
- Perspective and overhead views
- Multiple A-B lines per field, including straight track, swap track, circle track, A-B curves, adaptive curves, and row finder
- Guidance path accuracy indicator
- Parallel Tracking

Remote support is never more than a phone call away with your GS3 2630 and JDLink†. Your dealer can remotely access your display and quickly determine the problem.

†See page 31.
GreenStar 3 2630 Displays come ready with:

- Parallel Tracking
- Field Documentation
- Map-Based Prescriptions
- Harvest Documentation
- On-screen mapping

Enhance your GS3 2630 Display:

- AutoTrac™: Precision guidance
- AutoTrac RowSense™: Precision guidance for harvesting with combines
- Machine Sync: Automated unloading on the go and real-time combine and grain cart location.
- John Deere Section Control™: Automatically turn sprayer and planter sections on and off
- iTEC™ Pro: Automated headland turns for tractors
- Surface Water Pro™ Plus: Laser-free levees and advanced ditching capabilities
- Remote Display Access: Remotely access your operator’s display
- Wireless Data Transfer: Easily move data to and from your machines to MyJohnDeere

Access Manager gives you the ability to lock out specific functions so that they cannot be changed by machine operators, thereby ensuring accurate, consistent performance.

Easily monitor the activity outside the cab on your GreenStar 3 2630 Display. Its video-input capabilities let you take advantage of an externally mounted camera (not included).

You can use a USB drive to transfer data from the display to your office computer, or use Wireless Data Transfer to quickly and easily move your information to and from your machines to MyJohnDeere.
GreenStar™ 2 1800 Display

Not too big, not too small – just right

The GreenStar 2 1800 Display is a 7-inch full-color display with a simple interface and smaller price tag. You can easily toggle between multiple home pages to monitor more than one in-field activity and navigate through fields with greater control and confidence.

Like the GreenStar 3 2630, the GreenStar 2 1800 also runs your ISOBUS-compatible implements, ensuring future compatibility as you update. Take it hands-free with an AutoTrac™ activation, and upgrade to Section Control for automated application in spraying and planting.

The GreenStar 2 1800 comes with:
- Parallel Tracking: Steer manually with on-screen lightbar and coverage map
- On-Screen Mapping: Visual reference to verify field coverage
- ISO compatibility: Compatible with ISOBUS implements, including SeedStar™ 2
- Rate Controller compatibility

Enhance the display’s capabilities with:
- AutoTrac
- Pivot Pro
- Documentation Basics
- John Deere Swath Control Pro™
The integrated display control is equipped with an easy-to-use scroll wheel along with check, cancel, menu, and home buttons.

Ten mapped letter keys correspond with soft keys in the display for quick one-touch operation.

For easy data transfer from another display or a computer, the 1800 Display features a USB port.

The GreenStar 2 1800 Display comes preloaded with Parallel Tracking for manual guidance and On-Screen Mapping, which provides a visual reference to verify field coverage.
A beacon for profit, at every level

Just as there are different agronomic practices, operators require different accuracy levels. Using our own StarFire™ network we can provide you with a reliable, accurate, and repeatable signal customized to your needs, delivering the accuracy and control you demand.

If you have heavily-treed fence lines or hilly ground, then you need the StarFire™ 3000 Receiver. It delivers outstanding reception in shaded conditions, holding a signal longer and reacquiring it faster than any previous model. That means maximum up-time and accuracy for you.

But that’s not all. The StarFire 3000 also provides improved performance in sloping terrain, as well as increased satellite availability through GLONASS, the Russian satellite constellation. Finally, the StarFire 3000 offers the ease of over-the-air receiver activation. Add it all up, and you have a receiver that’s made not just for the shade, but for any conditions you can throw at it.

|-----------------------|-------------------|----------------|----------------|---------------|

*WAAS is a government-sponsored differential correction signal with a static accuracy of approximately 75 cm (30 in.). This signal has no guarantee as to how long it will be available or when planned outages for maintenance are scheduled. WAAS is a low-level accuracy that is a free service for John Deere customers. WAAS pass to pass accuracy is +/- 13 inches.

*SF1 and SF2 accuracy levels are described on a pass to pass basis measured at the receiver, within 15 minutes, 95% of the time.

StarFire 3000 Receiver

With this receiver you can get started into precision guidance at the accuracy level you need at the time. From SF1 to the one-inch, repeatable accuracy of StarFire RTK, the StarFire 3000 Receiver grows with you.

Compatible Displays:
GreenStar 2 1800 and GreenStar 3 2630
John Deere offers its own differential corrections through the StarFire network. Developed in 1998, the StarFire network was the world’s first Global Satellite-Based Augmentation System (GSBAS) capable of decimeter real-time accuracy. Everyone uses the same raw satellite signals, but differential corrections are another story. Because John Deere owns its own network of reference stations and processing hubs, users do not have to rely on Wide Area Application Services/European Geostationary Navigation Overlay Service (WAAS/EGNOS) or go to a third-party differential corrections service.

**SF1.** The John Deere-exclusive SF1 differential correction signal delivers +/- 9-inch pass-to-pass accuracy, allowing you to take your hands off the wheel and increase performance in many farming operations. Ideal for tillage, seeding, and broad-acre spraying.

**SF2.** If you need higher accuracy, you can upgrade to SF2, which delivers +/- 2-inch pass-to-pass accuracy, to help you stay productive and focus on needed tasks while traveling down the field. Ideal for tillage, row-crop planting, seeding, self-propelled spraying, and broad-acre harvesting.

**RTK.** Use cropping practices that require the ultimate in accuracy? Then go with RTK. It provides +/- 1-inch accuracy and repeatability pass to pass. Take advantage of a John Deere dealer-owned RTK network, or set up your own. Ideal for sub-surface irrigation lines, high-value crops on beds and narrow strip-tilled furrows.

**John Deere RTK Radios.** The John Deere RTK Radio (FCC or Industry Canada license required) improves your signal coverage and maintains RTK’s one-inch accuracy, even in challenging terrain or dense foliage conditions. The John Deere 450 RTK Radio can be used with any receiver, as well as on the same base station as a John Deere 900 RTK Radio.
AutoTrac™
Precision Guidance

Compatible with: GreenStar™ Displays and StarFire™ 3000 Receiver

If you haven’t experienced AutoTrac assisted steering yet, call your dealer today and ask to take a test drive. AutoTrac hands-free guidance is truly one of those solutions where you’ll see the difference immediately. You’ll also feel the difference at the end of the day, after those long hours in your seat. AutoTrac offers more than just convenience. It can reduce input costs, reduce fuel usage and improve operator productivity. It’s easy to use and an easy boost to your bottom line, too.
AutoTrac™ RowSense™

Reap the rewards of a hands-free corn harvest

AutoTrac RowSense is the next step to pinpoint accuracy in corn harvesting. Fusing satellite correction data from the StarFire™ receiver with feeler data gathered from row sensors enables you to operate hands-free in corn, even in weedy conditions, curved passes, and downed corn.

AutoTrac RowSense is available for any combine and new and older John Deere and non-John Deere corn heads. See your dealer for compatibility details.

Pivot Pro

Pivot Pro (compatible with GS3 and GS2 displays) allows automatic guidance in defined concentric circles in fields with center-pivot irrigation systems. Pivot Pro brings the value of AutoTrac™ to producers using center-pivot irrigation, which includes reducing overlap and operator fatigue, while increasing productivity and profitability.
John Deere Machine Sync

John Deere Machine Sync allows the combine operator to automatically control the location of the tractor and grain cart while unloading on-the-go.

From the combine cab, a single glance at the display shows you where all the combines and tractors are in your network. As the combine operator, you can send a “ready-to-unload signal” and the software provides the combine location and bin-fill status to the cart operator, who can determine how quickly the combine will need to unload, prioritize which combine to go to first (when multiple combines are in the field), or call in additional carts as necessary. This can reduce wait time, fuel consumption, and even ground compaction.

When the tractor and grain cart pulls alongside your combine, Machine Sync lets you control the tractor’s speed and location from the combine cab, to mimic the movements of the combine as it unloads. This reduces spillage and operator stress, and ensures maximum harvesting uptime for the combine.

Machine Sync is simple to set up and use, even for inexperienced operators. And the full-color GS3 2630 Display provides all machines in the network visibility to real-time logistics for every machine in the network.
iTEC™ Pro

How do you make AutoTrac™ even better? With Intelligent Total Equipment Control. iTEC Pro is an activation for the GreenStar 3 System that coordinates tractor and implement functions with end turns. Plus, this system positions the tractor and implement correctly for the next pass, which increases both accuracy and efficiency.

*Here’s how it works:*

1. As you approach your headland, iTEC Pro works with AutoTrac guidance through your GreenStar 3 display to automatically...

2. Raise the implement and turn the tractor...

3. And reengage the implement, all hands-free.

Active Implement Guidance

Precision counts – especially when planting or working potato fields, strip-till corn or cotton, or specialty crops. That’s why you need Active Implement Guidance. It’s an active implement guidance system that keeps your tractor and implement on the same A-B line. So not only do you get increased accuracy for input placement, but also unmatched repeatability at the implement. The benefits are clear: Reduced input costs, less disturbance of post-emergent crops, and easier operation, especially on guess rows. Active Implement Guidance works with Shared Signal when using a StarFire 3000 Receiver.

iTEC Pro is used with the StarFire 3000 Receiver and GreenStar 3 2360 Display.
iGrade™ – Automated Water Management

For an advanced approach to leveling, ditching, grading, and plane generation, choose iGrade. This application automates the hydraulic commands of a scraper blade or pan, making your water management practices hassle-free. The Distance Trip feature lets you engage the tractor’s hydraulics based on distance traveled – a real advantage when creating furrows in headlands. iGrade also automates Surface Water Pro™ Plus, so ditching is even easier. Talk to your John Deere dealer to learn how iGrade can create cut-fill maps for your operators, ensuring dirt-moving efficiency.

Surface Water Pro™ Plus

Build levees and ditches easily – no lasers required. This software lets you see everything on your GreenStar™ 3 2630 Display. One person can work a field in less time, reducing fuel and labor costs.

The dial on the Surface Water Pro Plus screen allows you to steer the tractor left or right to keep elevation consistent. The levee track is recorded so you can use AutoTrac to automatically follow the correct path the next time you’re in the field.
John Deere Implement Detection

Reduce operator errors and ensure implements are set up exactly the same from year to year. Add Implement Detection to your equipment and your operators will no longer have to remember their last settings and offsets.

When a piece of equipment with Implement Detection is connected to a tractor using the GreenStar™ 2630 Display, you get a notification on the screen indicating the implement’s name, connection type, and other settings you’ve made previously. You can simply accept the settings and start working ... or make adjustments as necessary.

The next time you hook up your tillage equipment, the system remembers the last settings you used, saving you valuable time and letting you get to work faster.
GreenStar™ Rate Controllers

Add new capabilities and better in-field performance to your GreenStar™ 3 2630 Display, without the cab clutter. Rate Controllers allow your display to integrate with many implements, such as nutrient applicators, sprayers, manure applicators, liquid fertilizer applicators and planters. They also help you accomplish rate control and map-based prescriptions.

The GreenStar™ Rate Controller is a component that allows the GreenStar display to integrate with many implements, such as non-John Deere pull-type sprayers, anhydrous ammonia applicators, liquid manure spreaders, liquid fertilizer systems, and some planters.

GreenStar Rate Controller Dry is a component that allows the GreenStar 3 2630 Display to integrate with non-John Deere self-propelled and pull-type dry box spinner spreaders and single tank air carts.
Take control of your input costs

As input costs continue to increase, minimizing passes through the field and overlaps has become more important. John Deere offers tools to keep you in control of your costs.

John Deere Section Control lets you reduce input costs by turning sections on and off. Whether on sprayers or planters, by shutting off sections where product has already been applied or planted or when crossing over waterways, Section Control helps to reduce input costs and environmental impact. Paired with AutoTrac™, you can eliminate skips and overlaps, reducing your seed or input costs and increasing yield potential.

On planters, add Row Command to place seed only where you want it, saving 2-8% in seed usage.

SectionCommand, available on all tow-behind and tow-between 1910 Air Carts, controls output from all meters on the cart in up to eight sections.
John Deere Mobile Weather

Mobile Weather uses a sensor to display and document real-time weather on the GreenStar™ 2630 Display, including, wind speed and direction, Delta T*, temperature, and relative humidity.

Unlike other systems, which force you to stop spraying, climb out of cab, and use a hand-held device to check prevailing weather conditions, Mobile Weather lets you make in-cab product application decisions based on location-specific data.

You can also input your own spraying parameters into the system, and receive notifications when the present conditions are outside these preset parameters.

*Delta T is an important indicator for determining acceptable spraying conditions. It indicates evaporation rate and droplet lifetime, and is calculated by subtracting the wet bulb temperature from the dry bulb temperature.
Joining forces to bring you more precision

Sometimes, in doing business, you find an opportunity to work with another company to carry products that complement John Deere equipment. Your John Deere dealership now carries a select group of Raven Industries precision products to help you improve the efficiency of your nutrient and chemical application.

1. Raven AccuFlow™ is a trusted NH3 application system that delivers superior accuracy, ease of operation and reliable results. AccuFlow is an intricate part of the John Deere NH3 system that ensures your crops get the NH3 they need where they need it.

2. Raven Sidekick™ Pro™ is an ISO direct-injection system that improves efficiency when spraying chemicals or applying nitrogen stabilizers with anhydrous ammonia (NH3). With this system, you can spend more time in the field and cover more acres per day, ultimately saving money, effort, and time.

3. Raven SCS 450™ is an entry-level console for customers who require automatic rate control for liquid and NH3, without a major investment. (Shown with Sidekick console).

4. Raven SCS 660M™ is an entry-level console for customers who need automatic rate control for dry fertilizer and liquid manure, without a major investment.

5. Raven SmartBoom™ is a good option to ease into automatic section control.

6. & 7. Raven AutoBoom™ PowerGlide Plus™ and UltraGlide™ control the height of your boom to maintain a more uniform spray coverage and put less wear and tear on the boom. PowerGlide Plus uses wheel sensors to control boom height. UltraGlide uses ultra-sonic sensors to control boom height.

Raven Industries, AccuFlow, Sidekick Pro, SCS 450, SCS 660M, SmartBoom, AutoBoom PowerGlide Plus and UltraGlide are third-party trademarks. Used with permission.
John Deere Field Connect

You already know that moisture levels vary from field to field and plot to plot, but knowing when yield-robbing variances occur isn’t as easy to predict. Now it is with John Deere Field Connect in-field monitoring. This straightforward solution helps you pinpoint where crops thrive, resources are protected, and profits soar.

Intuitive and easy to use, John Deere Field Connect comes with the full support of your John Deere dealer. Field Connect uses field-installed probes to monitor moisture levels at various depths. It then sends the information to the web-based interface where you can see the data on your computer or mobile device.

Additional environmental sensors are available to monitor temperature, humidity, wind speed and direction, and also to measure rain and leaf wetness. At the office or in the field, you and your John Deere dealer can instantly see if your soil moisture levels are balanced and decide what measures need to be taken. Without delay or guesswork, you can advise your crew to make the adjustments needed to protect your yields and reduce costs.
John Deere Harvest Identification, Cotton

Module identification, manual tagging, and reconciling modules at the gin are a thing of the past...as are the extra resources needed to conduct these functions. Using the RFID reader on board the 7760 Cotton Picker, the system reads the RFID serial numbers embedded in the module wrap, documents 18 of the most important data points during module formation to improve traceability of cotton modules as they move from the field to gin yard and through the ginning process, and sends the information to the Controller. The controller collects the information and simultaneously displays the module count and serial number, and stores the information as a .txt file on the GreenStar™ 3 2630 Display. Once the information is collected it can be easily pulled off the Display via data card or USB drive or John Deere Wireless Data Transfer and sent electronically to the gin.

Operators can continue to harvest with module information continuously stored on the Display. At the gin, the system tracks modules back to the field to help understand lint yield, and validate varieties of cotton planted – especially important to gins that produce specialty cotton.
Stay connected with JDLink™

Whether you manage employees and an entire fleet or own and operate your own equipment, your challenges are similar: keeping the equipment in prime condition, managing costs, and protecting your investment. With JDLink™, Wireless Data Transfer and Remote Display Access, accomplishing these tasks is simpler than ever. No matter whether you’re at home or in the office, you also can be in the field actually seeing your operator’s screen on your computer, smartphone, or tablet.

And now, by partnering with your dealer and using JDLink, remote diagnostics for your equipment is a reality. Your dealer can use JDLink to retrieve diagnostic trouble codes and maintenance data to identify problems or maintenance needs before the technician leaves the dealership. The benefits: greater efficiency and improved uptime. JDLink Ultimate is available on many models of John Deere self-propelled equipment; JDLink Select is available for all makes, all models with a 12-volt hook-up to complement your fleet. For mixed fleets and non-powered equipment, JDLink Universal Telematics can help you track and monitor a broad array of assets with the convenience of monitoring all of them in one spot on the JDLink website.

†See page 31.
More uptime with remote support

A JDLink subscription gives your dealer the ability to provide you with remote support. Together, JDLink, Wireless Data Transfer, Remote Display Access and Service ADVISOR Remote can give you more uptime.*

With John Deere’s remote support tools, real-time information is as close as your tablet or smartphone, putting you in control, from almost any location. To learn more about your dealer’s remote support capabilities, visit your dealer today.

Wireless Data Transfer

Easily share data with trusted advisors and turn your information into a plan. With Wireless Data Transfer, you can effortlessly send files to your machine operators in the field. Once you’re done with an operation, all that information is waiting for you in MyJohnDeere to analyze to make improvements for next time. See page 30 for more information on MyJohnDeere.

Remote Display Access

Remote Display Access gives you, your farm manager or your dealer, with your permission, the ability to view an operator’s screen remotely. Operator training, implement setup or troubleshooting a problem can be accomplished without waiting on a service call while in the field.

Service ADVISOR Remote

Service ADVISOR Remote allows your dealer to make sure your equipment is running at peak performance. It saves you time on repairs as your dealer doesn’t have to make a visit to carry out diagnosis and then a follow up visit with the appropriate parts. Instead they can remotely identify any issues, diagnose the problem and bring out the right parts – all in a single visit.

*JDLink Ultimate subscription required.
AgLogic™

The AgLogic system is a proven software program delivering the right resources to the right place at the right time. Combining GPS, cellular technology and web-based software, AgLogic helps you manage and improve the productivity of your entire fleet, even non-John Deere machines, from any computer with Internet access. Manage work orders, schedule and dispatch applicators and tenders, all while getting real-time location information. Wirelessly transmit prescriptions to handheld devices and automatically send work order information to the field and back.
APEX™

APEX is software that lets you turn data you’ve collected in the field into intelligent, well-informed decisions back at the office. APEX works with data and applications from your GreenStar display. Standardized set up lists, automated unloading processes, plus integrated features reduce the amount of time required to manage data, giving you more time to manage the rest of your operation.

Mobile Farm Manager

John Deere Mobile Farm Manager gives you access to your data, no matter where you are. Define soil grids, track sample numbers and easily navigate from one field to the next from your phone or tablet. You can associate notes, flags, or even images to a specific area in the field where you are seeing a problem, and it’s all compatible with APEX. A “share” feature allows you to easily share data with trusted service providers and business partners. Moving data between Apex and Mobile Farm Manager is easy, too.

Mobile Farm Manager is compatible with iOS devices including iPhone and iPad. It is recommended to be on the latest version of iOS software prior to download.
HarvestLab™ Sensor

The HarvestLab moisture sensor uses Near-Infrared Technology (NIR) for accurate readings that aren’t affected by humidity or atmospheric conditions. You’ll get instantaneous moisture data, as well as yield data, that can be used in the cab to make informed decisions during harvest. The information can also be stored for later analysis and reporting.

Couple the HarvestLab sensor with the HarvestLab stationary kit for an easy-to-use solution for gathering data about your crop.
Beef and dairy producers can now determine corn silage nutrient quality when using John Deere HarvestLab. In addition to dry matter content, which HarvestLab has traditionally been used to measure, the expanded Constituent Sensing capabilities will be able to predict crude protein, starch and fiber (ADF/NDF), which are important nutrient factors in livestock feed. These constituent sensing calibrations have been developed for John Deere in partnership with DairyLand Labs, a recognized expert in forage analysis.

With real-time nutrient analysis, producers and nutritionists can more easily and quickly analyze feed rations for crude protein, fiber and other factors and make adjustments on a daily basis to improve nutrition and reduce feed variability.

The Constituent Sensing enhancement also enables more precise application of silage inoculants at harvest because rates can be adjusted according to crop and dry matter readings. The result is higher quality silage with greater feed value and less spoilage.
Collecting data on your operation is something you’re probably already doing. But that data is of little use to you if it’s difficult to access or analyze. MyJohnDeere and the new Operations Center changes all that. MyJohnDeere is a centralized online portal to access, view, archive and manage your operation’s information.

Within the My Operations center in MyJohnDeere, you can see average yield, total yield, average moisture, seeding variety and rates, machine location and more. The field analyzer tool lets you compare these layers side by side. And you can easily share planting, application and yield data with trusted advisors and receive variable rate prescriptions from those advisors.

And with Wireless Data Transfer, you can effortlessly send those to your machine operators in the field. Once you’re done with an operation, all that information is waiting for you in MyJohnDeere to analyze to make improvements for next time.

The sooner you start using MyJohnDeere, the faster you can begin enjoying the benefits of the data you’re already collecting. It’s simple, it’s user-friendly and it just makes sense. See your dealer for details or visit MyJohnDeere.com today.

**The right support**

There’s certainly an impressive list of reasons to invest in precision technology…but one of the best reasons is the long line of people who stand behind every product. We encourage you to visit your John Deere dealer today. Your dedicated and specially trained AMS staff is ready to help you get the most out of your experience.

The support you need, when you need it:
- 24/7 phone support, available 362 days a year: 1-888-476-7827
- Activation line: 1-888-953-3373
- JDLink support: 1-800-251-9928 or jdlinksupport@JohnDeere.com
- www.StellarSupport.com

*Activation/subscription required. Some additional accessories and/or components may be required. JDLink requires a cellular data connection to transfer information from machine to JDLink website. Consult your local John Deere Dealer for coverage availability.

**See dealer for compatible scenarios.
Easy to buy, easy to own.

We make sure nothing stands between you and the GreenStar™ products you need. When you’re ready to make the leap to GreenStar precision, we’re ready with financing options, attractive rates and flexible terms to make your decision and your access to our products easy and affordable.
